1 NIW Web Infrastructure

The project web infrastructure has been developed according to some general needs of the beneficiaries, such as:

1. having a web portal for communication between partners, and with visitors;
2. publishing documents on the web;
3. relying on a browsable repository in which to store files, papers and media;
4. exchanging information through different mailing lists.

Based on these needs, the coordinator has set up a server-based infrastructure enabling the use of 100% free, open source software.

1.1 Notes on this Deliverable

This deliverable is updated at the end of every project period. Supporting documents on the NIW web statistics can be found in the project website <http://www.niwproject.eu/>.

1.2 Hardware

A server has been set up on a dedicated PC that has found place in the server room of the coordinating institution, providing UPS backup system. Local data backup is ensured by an external USB drive. An external system provides further, remote data backup.

1.3 Operating System

A Linux Ubuntu 8.04 LTS (Hardy Heron) distribution (<http://www.ubuntu.com/>) has been chosen as server platform. This operating system is easier to use compared to other Linux distributions, and has a very good support (LTS means long term support). It is secure, reliable, and free.

1.4 Content Management System

The above Linux distribution is LAMP (Linux, Apache, MySQL and PHP). It allows the use of most content management system (CMS) available on the market.

A good CMS responds to the first point in the above list. We choose e107 (<http://e107.org/>) after comparing several among the best free CMS's available. e107 is an extensible platform, light and easy to use and customize. There are many CMS's exposing more features than e107. Mastering all such features requires longer training, furthermore they can be more easily forgot if they are not used on a highly frequent basis. We select this platform because it provides simple, efficient usability with respect of other systems. For the specific context of use, the CMS was customized concerning its graphics layout and navigation menus (1.1).

Currently, e107 is set to distinguish between NIW and non-NIW users. NIW members can access hidden areas where to upload/download documents. In general they have higher privileges compared to non-NIW users. For instance, they can post articles.

Every new subscription is managed by the administrator, upon approval by the system owner.

Even if customized to accommodate the beneficiaries' needs, still e107 was not easily browsable. Hence, we installed a specific plug, furthermore customized it by modifying its php code to set up a full browsable repository hierarchy (1.2). A quick help has been written, that can be found in <http://www.niwproject.eu/help/>. Moreover, online help can be found during the navigation.

Along with the CMS, the mailing lists are the main resources provided by the infrastructure.

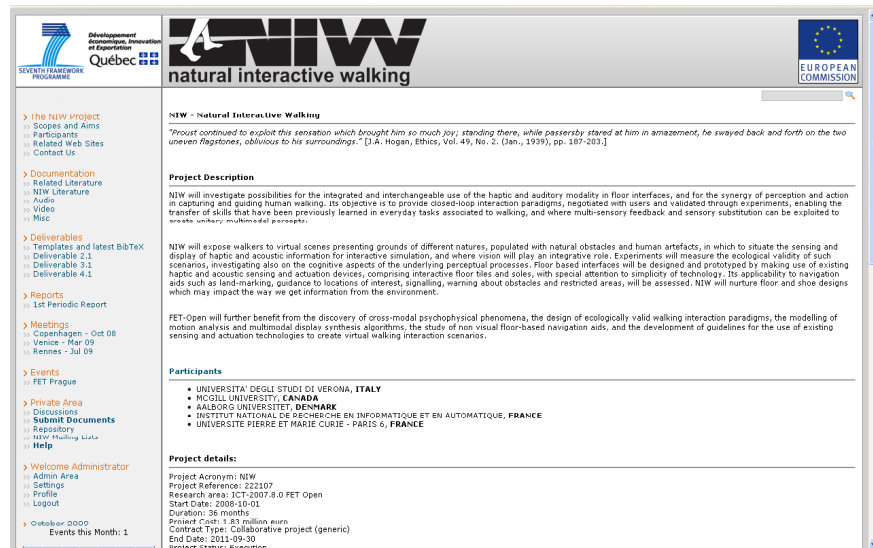

Figure 1.1: NIW Portal screenshot.

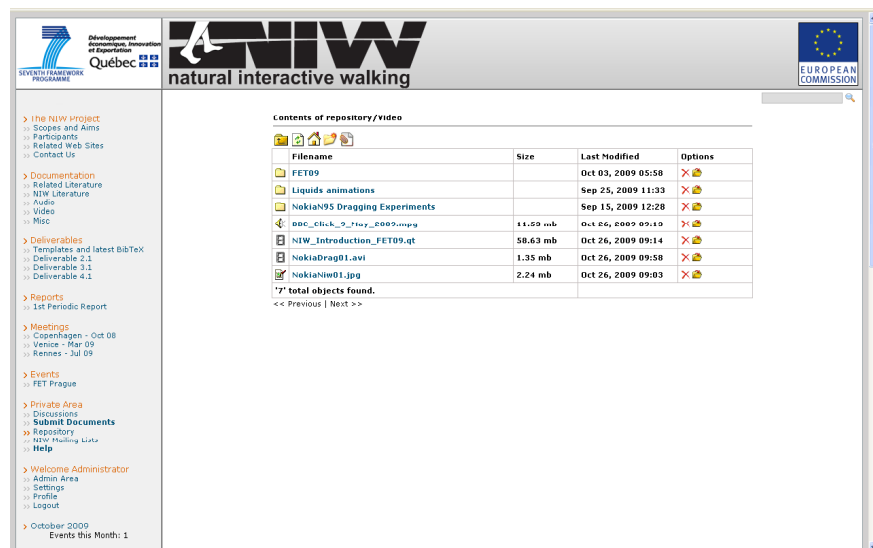

Figure 1.2: NIW Site repository screenshot.

1.5 Detailed CMS Used Features

In detail, users can choose the following items from a menu:

The NIW Project: static web pages, letting the people get general information about the project

- Scopes and Aims
- Participants
- Related Web Sites
- Contact Us

Documentation: lets users collect specific information about where the project roadmap is, as well as what has been done

- Related Literature [*References to literature related to the project's fields of research*]
- NIW Literature [*References to project's acknowledged literature*]
- Audio [*Audio examples (project outcome)*]
- Video [*Videos on installations and experiences made during the project*]
- Misc [*Miscellaneous material, in particular inter-project research missions*]

Deliverable: a private area that lets authorized users manage the deliverables. A public area containing the same deliverables in final form.

Reports: project reporting

Meetings: minutes and other documentation from the project meetings

Events: project related events

Private Area: (visible only to NIW members)

- Submit Documents [*New documentation can be posted here*]
- Repository [*Hierarchical file repository*]
- NIW Mailing Lists [*Link to the project mailing lists*]
- Help [*How to use the portal and how to post a document, including multimedia attachments*]

1.6 Mailing Lists

The adopted mailing lists system is called Mailman (<http://www.gnu.org/software/mailman/>), one of the best mailing list manager available. The mailing list provides access to NIW members only, upon authorization by the administrators. There are three mailing lists:

- Niw-atlarge [*for broader subjects (traveling, research missions, conferences, event organization, misc)*]
- Niw-management [*for mails concerning management, money, official document delivery*]
- Niw-research [*for every research subject*]

Figure 1.3 is a screenshot of our mailing list front-end main page.

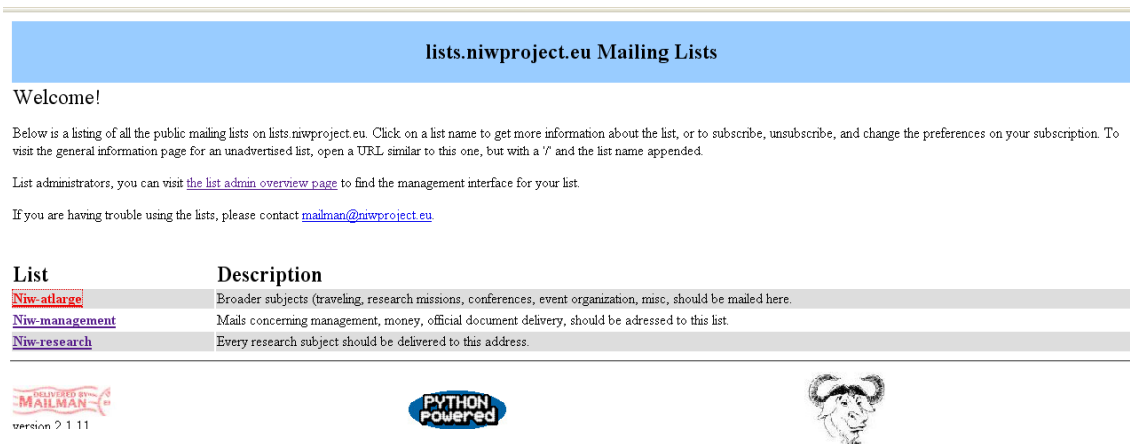

Figure 1.3: NIW Mailing List home page screenshot.

1.7 Metrics

Metrics are analyzed and stored using awstats (<http://awstats.sourceforge.net/>). The access to these data is available only to administrators.

1.8 Backend Systems

The system has other software and scripts that keep the infrastructure safe, up and running. A discussion on these systems would make this deliverable exceedingly technical, and is avoided also for security reasons.

1.9 Conclusions

The LAMP based infrastructure, with CMS and ML, at the moment meets all the beneficiaries' expectations in terms of efficiency, security and stability. Changes have been required during and after its setup, to add functionalities or to comply with new requirements. The coordinator is constantly listening to the consortium and the Commission, in an effort to keep the web site at edge performances.

2 Metrics analysis

The current deliverable has been regularly updated with supporting documentation, providing figures and metrics on the access and visits to the web site. This documentation can be also found online on the same area of the web site where this deliverable is maintained.

From such metrics, it is clear that the number of visits has been constantly growing across the life cycle of the project, finally reaching very interesting results. This trend is highlighted in the first five following pages, containing summaries of the statistics of the periods January-September 2009, October-December 2009, January-September 2010, October-December 2010, January-September 2011, respectively.

More detailed statistics follow from the sixth page on after this page.

2.1 Note on the second period

Unfortunately, at mid August the project web server was object of a malicious attack coming from hackers. In consequence of this attack, the server was disconnected by the Internet until a deep disinfection and restoration of the data was performed on it. The server was booted again on mid September, after removing the web calendar that caused the vulnerability.

Drops in the number of visits occurred in August and September 2010 are consequence of the interruption of service caused by server hacking.
