Guidelines for the deliverables

Federico Fontana, Friday 25 September 2009 - 00:14:33

I have just adapted some latex files used in Verona for delivering in a former project (many thanks to the CLOSED crew).

I think that the .zip enclosed here is largely self-explaining. It contains in particular an easily adaptable skeleton for Deliverable 4.1. I suggest to maintain this skeleton in a way that
i) any leader changes the title, level of permission, author names etcetera of her/his own deliverable, and
ii) he/she receives subfolders from co-workers, that are consequently collated in the deliverable as sections (or chapters, parts, or whatever needed: at the moment I have foreseen only sections for del. 4.1, but let's see...)

deliverablestemplate.zip

Concerning the bibliography, I would like to implement a concurrent access that, if correctly performed, in the end will allow us to have an amazing collection of the state of the art in the literature of interactive walking. Together with the latex material I uploaded the .bib file named niw_1_0.bib, that you already have in the current archive. It was first compiled when some of us were working on the IJHCI manuscript, now in press.

Would be great if any of us will regularly download in this same category the Nth latest (i.e. niw_1_N.bib) version of the .bib file from the website before compiling (with pdflatex), then possibly upload an (N+1)th version niw_1_(N*1).bib if further titles are added in the same. I think this effort will be greatly rewarding at the end of the project.

CAUTION: (UNFORTUNATELY THE WEB SITE DOES NOT ACCEPTS .BIB FILES (why?). SHOULD BE ZIPPED BEFORE THE UPLOAD
